

BlueShore Financial

The Business

Based in North Vancouver, Canada, BlueShore Financial is a boutique financial institution. Founded in 1941, it has \$4 billion in Assets under Administration, more than 300 employees and 40,000 members. The credit union provides expert advice on banking, personal and commercial loans, investments, wealth management products and services, insurance and leasing.

BlueShore uses Temenos Core Banking solutions as the centre of an integrated set of software applications which enable it to offer new and innovative products to its customers. Temenos offers annual upgrades to its product, and BlueShore works to adopt these on a regular basis to make sure that it retains and improves its competitive edge.

The Challenge

This policy, although offering large benefits to BlueShore, also introduces complexity and challenges to the business since the technology landscape and integrated components are complex. BlueShore decided to use a specialised set of test tools from Atoma to help to simplify, accelerate and de-risk the process of executing and rolling out application upgrades.

The Results

By leveraging Atoma's Test Suite components BlueShore has succeeded in supporting this practice.

Together, the Atoma test tools have helped BlueShore to remain lean and focussed in resourcing terms, whilst gaining extra agility. In addition, BlueShore has also implemented Atoma's Test and Quality Assurance Framework, hence making this process even more easily repeatable in the future.
